

“Tring”

“Tring” is a reminder application that provides a payment management solution. Its main feature is that it helps you to make timely payments for all your subscriptions.

When a GenZ consumer like Hitesh who forgets about the payment deadlines, offers and discounts of the various platforms he is a member of, he only has to enter when these are due into the application and according to its priority in time, the reminders will be listed.

In “Tring”, you can login using your existing “Tring” account by entering the username (email) and password. Or you can register using your name, e-mail and a new password. Once you have logged in, there are options to see all reminders (today’s and the month’s), add reminders by entering the reminder and its due date and time, and settings (change your password). The language used is Python and the database is created in Mysql. The GUI is created in Python Tkinter.

In this busy world, “Tring” helps us to remember the various bill payments and to not miss out any offers and discounts. The application can be further modified to show notifications, auto-generated Whatsapp messages or send emails to remind you before the due date. It can also be collaborated with UPI platforms to pay the bills in a single click.
